
Acknowledgements

These notes were developed originally for the course on Nonlinear Waves (APPM 7300) at the University of Colorado, taught by M.J. Ablowitz. The notes were written during the 2003–2004 academic year with important contributions and help from Drs C. Ahrens, M. Hoefer, B. Ilan and Y. Zhu. Sincere thanks are also due to Douglas Baldwin who carefully read and helped improve the manuscript. The author is deeply thankful to Dr. T.P. Horikis who improved and enhanced the first draft of the notes during the 2006–2007 and 2007–2008 academic years, and for his major efforts during the spring 2010 semester. Appreciation is due to the National Science Foundation and the Air Force Office of Scientific Research (AFOSR) who have supported the research that forms the underpinnings of this book. Deep thanks are due to Dr. Arje Nachman, Program Director AFOSR, for his vital and continuing support.
